1.3 Before you start

1.3.1 Copyright

This document may be duplicated and distributed only with the express permission of Siemens, and may be passed only to authorized persons or companies with the required technical knowledge.

1.3.2 Quality assurance

This document was prepared with great care.

- The contents of this document is checked at regular intervals
- Any corrections necessary are included in subsequent versions
- Documents are automatically amended as a consequence of modifications and corrections to the products described

Please make sure that you are aware of the latest document revision date.

If you find lack of clarity while using this document, or if you have any criticisms or suggestions, please contact the Product Manager in your nearest branch office.

The addresses of the Siemens Regional Companies are available at

www.buildingtechnologies.siemens.com.

1.3.3 Document use / request to the reader

Before using our products, it is important that you read the documents supplied with or ordered at the same time as the products (equipment, applications, tools, etc.) carefully and in full.

We assume that persons using our products and documents are authorized and trained appropriately and have the technical knowledge required to use our products as intended.

More information on the products and applications is available:

- On the intranet (Siemens employees only) at <https://workspace.sbt.siemens.com/content/00001123/default.aspx>
- From the Siemens branch office near you www.buildingtechnologies.siemens.com or from your system supplier
- From the support team at headquarters fieldsupport-zug.ch.sbt@siemens.com if there is no local point of contact

Siemens assumes no liability to the extent allowed under the law for any losses resulting from a failure to comply with the aforementioned points or for the improper compliance of the same.

2 Summary

2.1 Brief description

Applications

- 2-pipe fan coil units, 2-pipe with electric heater, 2-pipe with radiator / floor heating
- 4-pipe fan coil units, 4-pipe with electric heater
- 2-stage heating or cooling application
- Compressors in dx type equipment
- Universal heating and/or cooling

Features, all types

- 2 multifunctional inputs and 1 digital input for keycard contact, external sensor, etc.
- Operating modes: Comfort, Economy and Protection
- Automatic or manual heating / cooling changeover
- Adjustable commissioning and control parameters
- Minimum and maximum setpoint limitation
- Backlit LCD
- Selection of fan stage in the dead zone via P15 (SW V7.2 and higher / device index E)

RDG100, RDG100T features

- AC 230 V operating voltage, on/off, PWM or 3-position control outputs (triac)
- Output for 3-speed or 1-speed fan

RDG110 features

- AC 230 V operating voltage, on/off control outputs (relay)
- Output for 3-speed or 1-speed fan

RDG140 features

- AC 24 V operating voltage, DC 0...10 V control outputs
- Output for 3-speed or 1-speed fan

RDG160 features

- AC 24 V operating voltage, DC 0...10 V control outputs
- Output DC 0...10 V for fan control

Additional RDG100T features

- Infrared remote control receiver
- Auto Timer mode with 8 programmable timers
- Auto timer can be disabled via P02 (SW V7.2 and higher / device index E)

RDG100T/H features

- Landscape design
- Features as RDG100/T, but operating elements (buttons) to the right instead or below the display

Functions

- Maintenance of room temperature via built-in temperature sensor or external room temperature / return air temperature sensor
- Automatic or manual changeover between heating and cooling mode
- Selection of applications via DIP switches
- Selection of operating mode via the operating mode button on the thermostat
- 1-speed, 3-speed or DC...10 V fan control (automatic or manual)
- Display of current room temperature or setpoint in °C and/or °F
- Minimum and maximum setpoint limitation
- Button lock (automatic or manual)
- 1 digital input, freely selectable for:
 - Operating mode switchover contact (keycard)
 - Automatic heating / cooling changeover contact
 - Electric heater enable
 - Dewpoint sensor
 - Fault input

- 2 multifunctional inputs, freely selectable for:
 - Operating mode switchover contact (keycard)
 - Automatic heating / cooling changeover sensor
 - External room temperature or return air temperature
 - Dewpoint sensor
 - Electric heater enable
 - Fault input
- Advanced fan control function, i.e. fan kick, fan start, selectable fan operation (enable, disable or depending on heating or cooling mode)
- Purge function together with 2-port valve in a 2-pipe changeover system
- Reminder to clean filters
- Floor heating temperature limit
- Reloading factory settings for commissioning and control parameters
- 7-day time program: 8 programmable timers to switch over between Comfort and Economy mode (RDG100T, RDG100T/H)
- Infrared remote control (RDG100T, RDG100T/H)

2.2 Types and features

Product no.	Features								
	Operating voltage	Number of control outputs				Time program	Backlit LCD	Infrared receiver ¹⁾	ECM Fan ²⁾
		ON/OFF	PWM	3-pos	DC 0..10 V				
RDG100	AC 230 V	3 ³⁾	2 ³⁾	2 ³⁾			✓		
RDG100T	AC 230 V	3 ³⁾	2 ³⁾	2 ³⁾		✓ ⁵⁾	✓	✓	
RDG100T/H	AC 230 V	3 ³⁾	2 ³⁾	2 ³⁾		✓ ⁵⁾	✓	✓	
RDG110	AC 230 V	2 ⁴⁾					✓		
RDG140	AC 24 V				2		✓		
RDG160	AC 24 V				2		✓		✓

1) Infrared remote control must be ordered as a separate item

2) ECM fan output DC 0...10 V

3) ON/OFF, PWM or 3-position (triac outputs)

4) Relay output (SPDT)

5) Can be disabled via P02 (SW V7.2 and higher / device index E)

2.3 Equipment combinations

	Description		Product no.	Data Sheet
	Infrared remote control		IRA211	3059
	Cable temperature sensor		QAH11.1	1840
	Room temperature sensor		QAA32	1747
	Condensation detector / extension module		QXA2000 / AQX2000	1542
<i>On / off actuators</i>	Electromotoric ON/OFF valve and actuator (only available in AP, UAE, SA and IN)		MVI.../MXI...	4867
	Electromotoric ON/OFF actuator		SFA21...	4863
<i>On / off and PWM actuators *)</i>	Thermal actuator (for radiator valves)		STA21...	4877
	Thermal actuator (for small valves 2.5 mm)		STP21...	4878
	Zone valve actuators (only available in AP, UAE, SA and IN)		SUA...	4830
<i>3-position actuators</i>	Electrical actuator, 3-position (for radiator valves)		SSA31...	4893
	Electrical actuator, 3-position (for small valves 2.5 mm)		SSP31...	4864
	Electrical actuator, 3-position (for small valves 5.5 mm)		SSB31...	4891
	Electrical actuator, 3-position (for CombiValves VPI45)		SSD31...	4861
	Electromotoric actuator, 3-position (for valves 5.5 mm)		SQS35...	4573
<i>DC 0...10 V actuators</i>	Electrical actuator, DC 0...10 V (for radiator valves)		SSA61...	4893
	Electrical actuator, DC 0...10 V (for 2- and 3-port valves / V...P45)		SSC61...	4895
	Electrical actuator, DC 0...10 V (for small valves 2.5 mm)		SSP61...	4864
	Electrical actuator, DC 0...10 V (for small valves 5.5 mm)		SSB61...	4891
	Electrical actuator, DC 0...10 V (for CombiValves VPI45)		SSD61...	4861
	Electromotoric actuator, DC 0...10 V (for valves 5.5 mm)		SQS65...	4573
	Thermal actuator, DC 0...10 V (for small valves and radiator valves)		STS61	4880

*) Note: With PWM control, it is not possible to ensure exact parallel running of 2 or more thermal actuators. If several fan coil systems are controlled by the same room thermostat, preference should be given to motorized actuators with ON/OFF or 3-position control

2.4 Accessories

Description	Product no.	Data Sheet
Changeover mounting kit (50 pcs / package)	ARG86.3	3009
Adapter plate 120 x 120 mm for 4" x 4" conduit boxes	ARG70	3009
Adapter plate 112 x 130 mm for surface wiring	ARG70.2	3009

2.5 Ordering

Product no.	Stock number	Designation
RDG100	S55770-T158	Room thermostat
RDG100T	S55770-T159	Room thermostat, with timer
RDG100T/H	S55770-T235	Room thermostat, with timer, landscape housing
RDG110	S55770-T160	Room thermostat
RDG140	S55770-T161	Room thermostat
RDG160	S55770-T162	Room thermostat

Order the **IRA211** infrared remote control separately.

Order valve actuators separately.

3 Use

The RDG1... room thermostats are designed for use with the following types of system:

Fan coil units via ON/OFF or modulating control outputs:

- 2-pipe system
- 2-pipe system with electric heater
- 2-pipe system and radiator / floor heating
- 4-pipe system
- 4-pipe system with electric heater
- 2-stage heating or cooling system

Chilled / heated ceilings (or radiators) via ON/OFF or modulating control outputs:

- Chilled / heated ceiling
- Chilled / heated ceiling with electric heater
- Chilled / heated ceiling and radiator / floor heating
- Chilled / heated ceiling, 2-stage cooling or heating

Heat pumps with dx type equipment:

- 1-stage compressor for heating or cooling
- 1-stage compressor for heating or cooling with electric heater
- 1-stage compressor for heating or cooling and radiator / floor heating
- 1-stage compressor for heating and cooling with reversing valve
- 2-stage compressor for heating or cooling

4 Functions

4.1 Temperature control

General note

Setting of the control parameters (P01, etc., mentioned throughout the document) is described in section 4.15.

The thermostat acquires the room temperature via built-in sensor, external room temperature sensor (QAA32), or external return air temperature sensor (QAH11.1), and maintains the setpoint by delivering actuator control commands to heating and/or cooling equipment. The following control outputs are available depending on the thermostat type:

- 2-position control on **RDG100, RDG100T, RDG100T/H, RDG110**
- Modulating PI / P control with 3-position control output on **RDG100, RDG100T, RDG100T/H**
- Modulating PI / P control with PWM output on **RDG100, RDG100T, RDG100T/H**
- Modulating PI / P control with DC 0...10 V control output on **RDG140, RDG160**

The switching differential or proportional band is 2 K for heating mode and 1 K for cooling mode (adjustable via parameters P30 and P31).

The integral action time for modulating PI control is 5 minutes (adjustable via parameter P35).

Display

The display shows the acquired room temperature or the Comfort setpoint, selectable via parameter P06. The factory setting displays the current room temperature. Use parameter P04 to display the room temperature or setpoint in °F rather than °C as needed.

If the thermostat is used in a system with manual heating / cooling changeover (P01 = 2), the heating  and cooling  symbols on the display show the fan coil or terminal unit's status. Thus, the symbols are displayed even when the thermostat operates in the neutral zone. For all other cases, the heating  and cooling  symbols are displayed when the heating or cooling output is activated.

Concurrent display of °C and °F

Concurrent display of the current temperature or setpoint in °C and °F (parameter P07) is possible on the thermostats without 7-day time program.

4.2 Operating modes

Select the thermostat's operating mode via the operating mode button on the unit or operating mode input (e.g. keycard occupancy sensor), when X1, X2, or D1 is set to 3 (P38, P40, P42). A corresponding setpoint is used to maintain the room temperature at the desired level depending on the active operating mode. The following operating modes are available:

- Comfort mode**  In Comfort mode, the thermostat maintains the room temperature setpoint which can be adjusted via the **rotary knob**. The fan can be set to automatic or manual fan speed: Low, medium or high.
- Economy mode**  Economy mode helps save energy. Select it by pressing the operating mode button if parameter P02 is set accordingly, or if the external operating mode switchover contact is active (e.g. window contact).
- Note** If the external operating mode switchover contact is active, user operations are ineffective and OFF is displayed. Control will then be according to Economy setpoints (P11 and P12).
- Protection mode**  In Protection mode, the system is
- protected against frost (factory setting **8 °C**, can be disabled or changed via P65)
 - protected against overheating (factory setting **OFF**, can be enabled or changed via P66)
- Auto Timer mode**  **(with RDG100T, RDG100T/H only)** In Auto Timer mode , the thermostat automatically changes from Comfort to Economy mode according to the 8 preprogrammed timers. The display shows the Auto Timer mode symbol  along with the symbol for the current operating mode (Comfort  or Economy ). Automatic is the default fan speed in Auto Timer mode. Auto Timer function can be disabled with parameter P02 = 3 or 4 (SW V7.2 and higher / device index E)

Operating mode button The behavior of the operating mode button can be selected via parameter P02:

#	Without time program	With time program (RDG100T, RDG100T/H only)	Remark
1	 → 	 →  → 	Factory setting
2	 →  → 	 →  →  → 	
3		 → 	
4		 →  → 	

4.3 Room temperature setpoints

Comfort mode

The factory setting for the Comfort basic setpoint is **21 °C** and can be changed via parameter P08.

The setpoint in Comfort mode can be adjusted via the **rotary knob**.

Temporary setpoint

If the “Temporary setpoint function” is enabled via parameter P69, the setpoint adjusted via the rotary knob is set back to the Comfort basic setpoint when the operating mode changes.

Setpoint limitation

For comfort or energy saving purposes, the setpoint setting range can be limited to minimum (P09) and maximum (P10).

P09 < P10

(comfort concept)

- If the minimum limit **P09 is set lower** than the maximum limit P10, both heating and cooling are adjustable between these 2 limits
- The customer adjusts the desired setpoint and the thermostat controls the room temperature accordingly.
- For **4-pipe applications** *), the selected comfort setpoint is in the middle of the dead zone (P33). The unit stops to energize the heating / cooling outputs as soon as the room temperature reaches the dead zone.

Example

Cooling setpoint adjustable 18...25 °C
Heating setpoint adjustable 18...25 °C

P09 ≥ P10

(energy saving concept)

- If the minimum limit **P09 is set higher** than the limit P10, then
 - The setting range of cooling setpoint is from **P09...40 °C** in place of 5...40 °C
 - The setting range of heating setpoint is from **5...P10 °C** in place of 5...40 °C
 This allows the user to limit the maximum heating setpoint and the minimum cooling setpoint. This concept helps to save energy costs.
- For **4-pipe applications** *):
 - The thermostat runs with the setpoint of the active sequence:
In heating mode, the heating setpoint is active and adjustable via rotary knob.
In cooling mode, the cooling setpoint is active and adjustable via rotary knob.
 - Switching from the heating setpoint to the cooling setpoint and vice-versa occurs when the room temperature reaches the adjusted limitation (P09 or P10) of the **inactive** sequence. E.g. the thermostat is in heating sequence and runs with the heating setpoint. When the room temperature reaches P09, the thermostat switches to cooling mode and runs with the cooling setpoint, as long as the room temperature does not drop below P10.

Example

Cooling setpoint adjustable 25...40 °C
Heating setpoint adjustable 5...21 °C

***) Note: SW < V7.2 / device index < E**

- For heating **and** cooling applications (e.g. 4-pipe):
 - **P09** is the setpoint for cooling and **P10** the setpoint for heating
 - The setpoint can no longer be adjusted via the rotary knob

Economy mode

Use control parameters P11 and P12 to adjust the Economy mode setpoints.
The heating setpoint is factory-set to **15 °C**, and the cooling setpoint to **30 °C**.

Protection mode

Use control parameters P65 and P66 to adjust the Protection mode setpoints.
The heating setpoint is factory-set to **8 °C** (frost protection) and to **OFF** for cooling.

Caution

If a setpoint is set to OFF (P65, P66), the thermostat does not maintain the setpoint in the corresponding mode (heating or cooling).

This means no protective heating or cooling function and thus risk of frost in the heating mode or risk of overtemperature in cooling mode!

The Economy setpoints are accessible at the service level (P11, P12); the Protection setpoints at the expert level (P65, P66).

4.4 Setpoints and sequences

4.4.1 2-pipe and 2-stage applications

On changeover applications, the Comfort setpoints for heating and cooling sequence are the same (w).

On 2-pipe applications with electric heater, the Comfort setpoint is either at the first heating sequence (in heating mode) or at the cooling sequence (in cooling mode).

On 2-pipe applications with radiator, the Comfort setpoint is either at the radiator sequence (in heating mode) or at the cooling sequence (in cooling mode).

The setpoints for Economy and Protection mode are below the Comfort setpoints (heating) and above the Comfort setpoints (cooling).

They can be set via parameters P11, P12 (Economy mode) and P65, P66 (Protection mode).

Application	Comfort mode		Economy / Protection mode	
	Heating mode	Cooling mode	Heating mode	Cooling mode
2-pipe				
2-pipe & el. heater				
2-pipe & radiator				
2-stage heating or cooling				

1) If P13 = ON

2) In case of manual changeover (P01=2), the first heating sequence is disabled to prevent heating (el. heater) and cooling (coil) at the same time

W = setpoint in Comfort mode

$W_{HeatEco/Prot}$ = setpoint heating in Economy or Protection mode

$W_{CoolEco/Prot}$ = setpoint cooling in Economy or Protection mode

YR = radiator sequence

YE = electric heater sequence

4.4.2 4-pipe applications

On 4-pipe applications, the Comfort setpoint (w) is in the middle of the dead zone, between the heating and cooling sequence.

The dead zone can be adjusted via parameter P33.

If manual changeover is selected, then either the cooling sequence or the heating sequence is released. In this case, the Comfort setpoint is at the selected heating or cooling sequence.

Application	Comfort mode			Economy / Protection mode Heating and/or cooling
	Heating and Cooling	Heating mode ¹⁾	Cooling mode ¹⁾	
4-pipe				
4-pipe & el. heater				

1) Manual changeover, P01=2

W = setpoint in Comfort mode

$W_{HeatEco/Prot}$ = heating setpoint for Economy or Protection mode

$W_{CoolEco/Prot}$ = cooling setpoint for Economy or Protection mode

YE = electric heater sequence

4.5 Applications overview

The thermostats support the following applications, which can be **configured via DIP switches** at the rear of the unit. Depending on the type of thermostat, on/off or modulating control outputs are available.

Application (set via DIP switches 1...3)	DIP switch	Control output (set via DIP swi. 4 and 5)	Product no.
Heating or cooling <ul style="list-style-type: none"> 2-pipe fan coil unit Chilled / heated ceiling 1-stage compressor ¹⁾ 		ON/OFF, PWM, 3-position	RDG100..

- 1) Heat pump application covered by RDG110
(SPDT = relay with NO and NC contact)
- 2) With ECM fan control DC 0...10 V

Key	Y1	Heating or heating/cooling valve actuator	M1	1-speed or 3-speed fan
	Y2	Cooling valve actuator	B1	Return air temperature sensor or external room temperature sensor (optional)
	E1	Electric heater	B2	Changeover sensor (optional)

Note The diagrams above only show the water-based fan coil applications, but not the compressor

Universal applications

The RDG1xx.. can also be used on universal applications, e.g. fan coil-based cooling and floor heating, or chilled ceiling and electric heater, etc.
For more detailed information, refer to subsection 4.7.9 ff.

4.6 Additional features

Automatic heating / cooling changeover

The water temperature acquired by the changeover sensor (QAH11.1 + ARG86.3) is used to change over from heating to cooling mode, or vice versa.

- When the **water temperature** is above 28 °C (adjustable via parameter P37), the thermostat changes over to **heating mode**.
It stays in heating mode until the temperature falls below 16°C (adjustable via parameter P36)
 - When the **water temperature** is below 16 °C (P36), the thermostat changes over to **cooling mode**.
It stays in cooling mode until the temperature rises above 28°C (P37).
 - If the water temperature is between the 2 changeover points immediately after power-up (inside the hysteresis), the thermostat starts in previous mode.
- The water temperature is acquired at 30-second intervals and the operating state is updated accordingly.

Remote heating / cooling changeover

The QAH11.1 cable temperature sensor for automatic heating / cooling changeover can be replaced by an external switch for manual, remote changeover:

The sensor or switch can be connected to input terminal X2 (factory setting) or X1 or D1 (switch only), depending on the commissioning of the inputs (P38, P40, P42). See also section 4.10 "Multifunctional input".

Manual heating / cooling changeover	<ul style="list-style-type: none"> • Manual heating / cooling changeover means selection via changeover button on the thermostat by repeatedly pushing the button until the required mode is shown on the display (automatic changeover is done via an external sensor / switch connected to X1, X2, or D1) • If manual heating / cooling changeover is commissioned (P01 = 2), then heating / cooling mode cannot be changed via changeover sensor / switch; it will remain in the last mode as selected locally via button.
External / return air temperature sensor	<p>The thermostat acquires the room temperature via built-in sensor, external room temperature sensor (QAA32), or external return air temperature sensor (QAH11.1) connected to multifunctional input X1 or X2.</p> <p>Inputs X1 or X2 must be commissioned accordingly. See section 4.10 "Multifunctional input".</p>
Purge function	<p>The changeover sensor ensures changeover from heating to cooling mode based on the acquired water temperature. We recommend activating the purge function (parameter P50) with 2-port valves. This function ensures correct acquisition of the medium temperature even if the 2-port valve is closed for an extended period of time. The valve is then opened for 1 to 5 minutes (adjustable) at 2-hour intervals during off hours.</p>
Caution 	<p>The purge function (parameter P50) must be disabled if the thermostat is used in compressor-based applications.</p>
Avoid damage from moisture	<p>In very warm and humid climates, the fan can be run periodically or continuously at a low fan speed (e.g. in empty apartments or shops) in Economy mode by setting parameter P61, in order to avoid damage from moisture due to lack of air circulation. See also section 4.9 "Fan control", under "Fan kick function".</p>
Minimum output on-time / off-time	<p>Limit the on/off switching cycle to protect the compressor and reduce wear and tear. The minimum output on-time and off-time for 2-position control output can be adjusted from 1 to 20 minutes via parameters P48 and P49.</p> <p>The factory setting is 1 minute.</p> <p>Readjusting the setpoint or heating / cooling mode changeover immediately results in calculation of the output status; output Y11/Y21 may not hold the minimum 1-minute on/off time.</p> <p>If parameter P48 or P49 is set to above 1 minute, the minimum on/off time for the control output is maintained as set, even if the setpoint or changeover mode is readjusted.</p> <p>This function is only available for on/off control with RDG100, RDG100T, RDG100T/H and RDG110.</p>
Floor heating / Floor cooling	<p>All heating sequences can also be used for floor heating.</p> <p>You can use fan coil heating / cooling sequences for floor heating or cooling by disabling the fan via parameter P52.</p>

Floor temperature limitation function

The temperature should be limited for 2 reasons: comfort and protection of the floor.

The floor temperature sensor, connected to multifunctional input X1 or X2, acquires the floor temperature. If the temperature exceeds the parameterized limit (parameter P51), the heating valve is fully closed until the floor temperature drops to a level 2 K below the parameterized limit.

This function is factory-set to OFF (disabled).

Input X1 or X2 must be commissioned accordingly (P38 or P40 = 1).

See section 4.10 "Multifunctional input".

Recommended values for P51:

Living rooms:

Up to 26 °C for long-term presence, up to 28 °C for short-time presence.

Bath rooms:

Up to 28 °C for long-term presence, up to 30 °C for short-time presence.

The table below shows the relation between parameter, temperature source and temperature display:

Parameter P51	External temp. sensor available	Source for display of room temperature	Output control according to	Floor temp. limit function
OFF	No	Built-in sensor	Built-in sensor	Not active
OFF	Yes	External temp. sensor	External temp. sensor	Not active
10...50°C	No	Built-in sensor	Built-in sensor	Not active
10...50°C	Yes	Built-in sensor	Built-in sensor + limit by external sensor	Active

The floor temperature limitation function influences the outputs listed in the table below:

Application	Output Y1	Output Y2	Output Y3	Floor temp. limit function has influence on			Remark
				Heat. mode (P01=0/2/3)	Cool. mode (P01=1/2/3)	Heat. & cool. mode (P01=4)	
2-pipe	H/C valve			Y1	N/A		
2-pipe & el heater	H/C valve	El. heater		Y2	Y2 *)		Only el. heater
2-pipe & radiator	H/C valve	Radiator		Y2	Y2		Only radiator
4-pipe	Heating valve	Cooling valve		Y1	N/A	Y1	
4-pipe & el heater	Heating valve	Cooling valve	El. heater	Y3	N/A	Y3	Only el. heater
2-stage	1st H/C	2nd H/C		Y1, Y2	N/A		

*) If P13 = ON --> el. heater in cooling mode

Dewpoint monitoring

Dewpoint monitoring is essential to prevent condensation on the chilled ceiling (cooling with fan disabled, parameter P52). It helps avoid associated damage to the building.

A dewpoint sensor with a potential-free contact is connected to multifunctional input X1, X2 or D1. If there is condensation, the cooling valve is fully closed until no more condensation is detected, and the cooling output is disabled temporarily.

The condensation symbol  is displayed during temporary override.

The input must be commissioned accordingly (P38, P40, P42).

See section 4.10 "Multifunctional input".

Button lock	<p>If the button lock function is enabled by parameter P14, the buttons will be locked or unlocked by pressing the right button for 3 seconds.</p> <p>If "Auto lock" is configured, the thermostat will automatically lock the buttons 10 seconds after the last adjustment.</p>
Operating mode switchover contact (window contact)	<p>The thermostat can be forced into Economy mode (e.g. when a window is opened). The window contact can be connected to digital input D1 (or multifunctional input X1, X2). Set parameter P42 (P38, P40) to 3.</p>
Extended Comfort mode (<i>operating mode switchover contact closed</i>)	<p>The left button switches the operating mode from Economy to Comfort for the period preset in P68, if the following conditions are fulfilled:</p> <ul style="list-style-type: none"> • The operating mode switchover contact is closed (connected to input X1, X2, D1, parameter P38, P40, P42 set to 3) • Parameter P68 (extend Comfort period) is greater than 0 <p>During the temporary Comfort mode extension, sandglass symbol  appears.</p> <p>If parameter P68 (extend Comfort period) = 0, extended Comfort cannot be activated; pressing the left button will show "OFF" (blinking 3 times).</p>
Temporary timer for extension of presence / absence	<p>The current operating mode can be forced temporarily into Comfort or Economy / Protection mode. The time period is adjusted via the rotary knob:</p> <ul style="list-style-type: none"> • Extend presence: Set the device to Comfort mode for the selected time period • Extend absence: Set the device to Economy / Protection mode for the selected time period <p>To activate the function, keep the left button pressed and, within 3 seconds, turn the rotary knob ...</p> <ul style="list-style-type: none"> • clockwise for extended presence • counterclockwise for extended absence <p>The rotary knob adjusts the time period:</p> <ul style="list-style-type: none"> • Extend presence: 0.00...+9:30 in steps of 30 minutes; symbol  appears • Extend absence: 0.00...-9:30 in steps of 30 minutes; symbol  or  appears <p>During the extended presence / absence period, sandglass symbol  appears.</p>

Function without time program

User profile for operating mode (selected via P02)	Operating mode when activating function	Function	Operating mode during function	Operating mode at the end of function

	Auto, Comfort or Economy	Absence	Economy	Auto

Note Extension / Absence functions are not available in protection mode

4.7 Control sequences

4.7.1 Sequences overview (setting via parameter P01)

The sequence can be set via **parameter P01**.

The thermostats can be used in systems featuring:

- Heating only (P01 = 0)
- Cooling only (P01 = 1)
- Manual heating / cooling changeover (P01 = 2)
- Automatic heating / cooling changeover (P01 = 3)
- Heating and cooling mode (e.g. 4-pipe system) (P01 = 4)

The available modes depend on the application
(selected via DIP switch, see section 4.5).

Parameter	P01 = 0	P01 = 1	P01 = 2	P01 = 3	P01 = 4
Sequence					
Mode	Heating mode	Cooling	Manually select heating or cooling sequence (using the button on the thermostat)	Automatic heating/cooling changeover via external water temperature sensor or remote switch	Heating and cooling mode, i.e. 4-pipe
Available for basic application ¹⁾ : ↓					
2-pipe, 2-pipe & el. heater 2-pipe & radiator	✓	✓	✓	✓	
4-pipe 4-pipe & el. heater			✓ ²⁾	✓ ²⁾	✓
2-stage heating or cooling	✓	✓	✓	✓	

Notes 1) Chilled / heated ceiling and radiator applications: see section 4.7.9;
Compressor applications: see section 4.7.10.

2) Manual and automatic changeover for 4-pipe applications, see section 4.7.6:

- 4-pipe **manual** changeover (P01 = 2) means activating either cooling or heating outputs
- 4-pipe **automatic** changeover (P01 = 3) means swapping the control outputs according to a heating / cooling sensor or remote switch (main and secondary application), see section 4.7.6

4.7.2 Control outputs configuration (setting via DIP switches 4 / 5 and parameters P46 / P47)

Control outputs Application ↓	ON / OFF (2-position)		Modulating PWM (2-position)	Modulating 3-position	Modulating DC 0...10 V	
2-pipe	✓	✓	✓	✓	✓	✓
2-pipe and electric heater	✓	✓	✓	✓	✓	✓

Available with type →	RDG100 RDG100T RDG100T/H	RDG110	RDG100 RDG100T RDG100T/H	RDG100 RDG100T RDG100T/H	RDG140	RDG160

* (only possible for 1 actuator)

With RDG100, RDG100T and RDG100T/H, the function of the control outputs (2-position or 3-position) is set via DIP switches 4 and 5.

With RDG140 and RDG160, DIP switches 4 and 5 can be used to invert the DC 0...10 V signal to 10...0 V.

The patterns of DIP switches 4 and 5 are as follows:

**RDG100, RDG100T,
RDG100T/H**

Y1 / Y2 =	2-position	2-position	3-position	3-position
Y3 / Y4 =	2-position	3-position	2-position	3-position

RDG140, RDG160

Y10 =	DC 0...10 V	DC 0 ... 10 V	DC 10 ... 0 V inv.	10 ... 0 V inv.
Y20 =	DC 0...10 V	DC 10 ... 0 V inv.	DC 0 ... 10 V	10 ... 0 V inv.

Note RDG100, RDG100T, RDG100T/H:

If 2-position is selected, the factory setting is on/off. If you want PWM (pulse width modulation), set parameters P46 and / or P47 to 2 = PWM.

RDG110: Only on/off available.

For details concerning connection of peripheral devices and setting of the DIP switches, refer to the Mounting Instructions:

- [4] M3181.1 (RDG100, RDG100T)
- [5] M3181.2 (RDG110)
- [6] M3181.3 (RDG140, RDG160)
- [7] M3181.4 (RDG100T/H)

4.7.3 2-pipe fan coil unit

On 2-pipe applications, the thermostat controls a valve in heating / cooling mode with changeover (automatic or manual), heating only, or cooling only. Cooling only is factory set (P01 = 1).

Refer to sections 4.5 ("Applications"), 4.7.1 ("Sequences") and 4.7.2 ("Outputs").

4.7.4 2-pipe fan coil unit with electric heater

Heating or cooling with auxiliary heater

On 2-pipe applications with electric heater, the thermostat controls a valve in heating / cooling mode with changeover, heating only, or cooling only plus an electric heater.

Cooling only is factory set (P01=1) with enabled electric heater (P13).

Electric heating, active in cooling mode

In cooling mode, the valve receives an **OPEN** command if the acquired temperature is above the setpoint.

The electric heater receives an **ON** command if the acquired room temperature drops below "setpoint" minus "dead zone" (= setpoint for electric heater) while the electric heater is enabled (parameter P13 = on).

Note: "Setpoint for electric heater" is limited by parameter "Maximum setpoint for Comfort mode" (P10).

Electric heating in heating mode

In heating mode, the valve receives an **OPEN** command if the acquired temperature is below the setpoint. The electric heater is used as an additional heating source when the heating energy controlled by the valve is insufficient.

The electric heater receives an **ON** command, if the temperature is below "setpoint" minus "setpoint differential" (= setpoint for electric heater).

Electric heating and manual changeover

The electric heater is active in heating mode only and the control output for the valve is permanently disabled when manual changeover is selected (P01=2).

Digital input "Enable electric heater"

Remote enabling / disabling of the electric heater is possible via input X1, X2 or D1 for tariff regulations, energy savings, etc.

Input X1, X2, or D1 must be commissioned accordingly (parameters P38, P40, P42). See section 4.10 "Multifunctional input".

Caution ⚠

An electric heater must always be protected by a safety thermostat!

Setting the sequence and the control outputs

Refer to sections 4.5 ("Applications"), 4.7.1 ("Sequences") and 4.7.2 ("Outputs").

4.7.5 2-pipe fan coil unit with radiator or floor heating

Heating or cooling with radiator or floor heating

On 2-pipe applications with radiator, the thermostat controls a valve in heating / cooling mode with changeover, heating only, or cooling only plus a radiator valve. Cooling only is factory-set (P01=1).

Radiator, active in cooling mode

In cooling mode, the valve receives an **OPEN** command if the acquired temperature is above the setpoint.
The radiator receives an **ON** command if the acquired room temperature drops below "setpoint" minus "dead zone" (= "setpoint for radiator").

Radiator in heating mode

In heating mode, the radiator receives an **OPEN** command if the acquired temperature is below the setpoint. The fan coil unit is used as an additional heat source when the heat energy controlled by the radiator is insufficient.
The fan coil unit receives an **ON** command if the temperature is below "setpoint" minus "setpoint differential" (= setpoint for fan coil unit).

Floor heating

The radiator sequence can also be used for floor heating.
The "Floor heating limitation function" is described on page 18.

Note The diagrams only show the PI controller's proportional part.

Setting the sequence and the control outputs

Refer to sections 4.5 ("Applications"), 4.7.1 ("Sequences") and 4.7.2 ("Outputs").

4.7.6 4-pipe fan coil unit

Heating and cooling

On 4-pipe applications, the thermostat controls 2 valves in heating and cooling mode, heating / cooling mode by manual selection, or heating and cooling mode with changeover. Heating and cooling mode (P01=4) is factory-set.

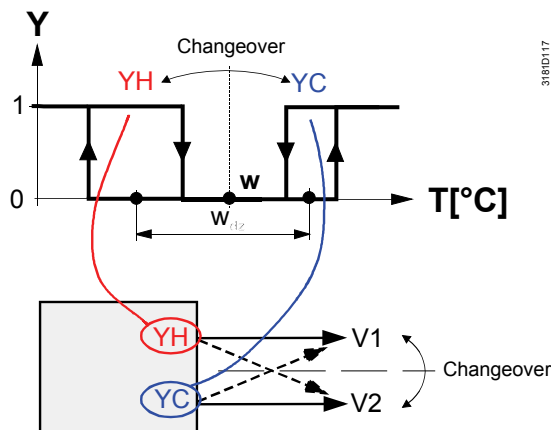

4-pipe application with manual changeover

The heating or cooling output can be released via operating mode button if parameter P01 is set to manual (P01=2).

“Main and secondary” application (4-pipe with changeover)

If parameter P01 is set to changeover (P01=3), the heating and cooling output is swapped according to the changeover sensor input status (see automatic heating and cooling changeover sensor, section 4.6). This mode is used for the so-called “Main and secondary” application. This is a 4-pipe fan coil unit system with different capacity of the 2 coils. The water circuit is changed to optimize the energy exchange depending on the season (summer/winter):

- Winter: Large coil (V1) for heating, small coil (V2) for cooling
- Summer: Large coil (V1) for cooling, small coil (V2) for heating

Note:
This example shows on/off control; for modulating control, connect the appropriate output terminals.

- Notes
- The factory setting for the heating and cooling changeover sensor (B2 in the above diagram) is input X2 (P40 = 2)
 - The thermostat assumes winter operation when B2 > P37 (factory setting 28 °C)
 - The thermostat assumes summer operation when B2 < P36 (factory setting 16 °C)

*) P09, P10 with SW V7.2 and later / device index E, see section 4.3.

Note The diagrams only show the PI controller's proportional part.

Setting the sequence and the control outputs

Refer to sections 4.5 ("Applications"), 4.7.1 ("Sequences") and 4.7.2 ("Outputs").

4.7.7 4-pipe fan coil unit with electric heater

Heating and cooling with auxiliary heater

On 4-pipe applications with electric heater, the thermostat controls 2 valves in heating and cooling mode by manual selection, heating and cooling mode with automatic changeover, heating only, or cooling only plus an electric heater. Heating and cooling is factory-set (P01=4).

Electric heating in heating mode

The electric heater is used as an additional heat source when the heating energy controlled by the valve is insufficient.

The electric heater receives an **ON** command when the temperature is below "setpoint" minus "1/2 "dead zone" minus "setpoint differential" (= "setpoint for electric heater").

Digital input "Enable electric heater"

Remote enabling / disabling of the electric heater is possible via input X1, X2, or D1 for tariff regulations, energy saving, etc.

Input X1, X2, or D1 must be commissioned accordingly (parameters P38, P40, P42). See section 4.10 "Multifunctional input".

Caution ⚠

An electric heater must always be protected by a safety thermostat!

4-pipe application with manual changeover

The heating or cooling output can be released via operating mode button if parameter P01 is set to manual (P01=2).

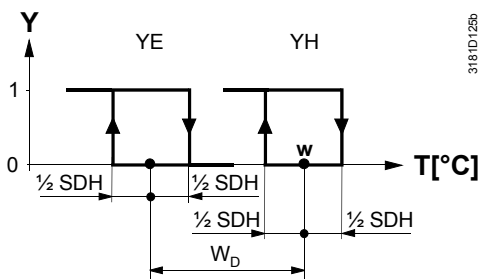

"Main and secondary" application

See section 4.7.6.

- Notes
- Y1 can only be on/off or PWM
 - Y2 can only be on/off
 - Y3 can be on/off, PWM or 3-position

4.7.8 2-stage heating or cooling

2-stage heating or cooling

On 2-stage applications, the thermostat controls 2 valves or compressors in heating or cooling mode or changeover (automatic or manual).
"Cooling only" is factory-set (P01=1).

Heating mode

In heating mode, the 1st stage is activated if the acquired temperature is below the setpoint.

The 2nd stage is activated if the acquired room temperature drops below "setpoint" minus "setpoint differential".

Cooling mode

In cooling mode, the 1st stage is activated if the acquired temperature is above the setpoint.

The 2nd stage is activated if the acquired room temperature rises above "setpoint" plus "setpoint differential".

ON/OFF control

Note The diagrams only show the PI controller's proportional part.

Setting the sequence and the control outputs

Refer to sections 4.5 ("Applications"), 4.7.1 ("Sequences") and 4.7.2 ("Outputs").

4.7.9 Chilled / heated ceiling and radiator applications

For chilled / heated ceiling and radiator,

- set the corresponding basic application
- disable the fan (P52)

The following applications are available:

Application for chilled / heated ceiling, radiator	Set basic application	See section	Sequences
Chilled / heated ceiling with changeover	2-pipe	4.7.3	H (\) C (/)
Chilled / heated ceiling & el. heater (cooling only: disable el. heater via P13)	2-pipe & electric heater	4.7.4	El. H + H (A \) El. H + C (A /) C (/)
Chilled / heated ceiling & radiator	2-pipe & radiator	4.7.5	H + rad (\ r \) Rad + C (r \ /)
Chilled ceiling and radiator	4-pipe	4.7.6	H + C (\ /)
Chilled / heated ceiling, 2-stage	2-stage heating or cooling	4.7.8	H + H (\ \) C + C (/ /)

4.7.10 Compressor applications (general)

For compressor applications,

- set the corresponding basic application
- disable the fan (P52) or set the fan speed (P53)

The following applications are available:

Application for chilled / heated ceiling, radiator	Set basic application	See section	Sequences
1-stage compressor	2-pipe	4.7.3	H (\) C (/)
1-stage compressor & el. heater (cooling only: disable el. heater via P13)	2-pipe & electric heater	4.7.4	El. H + H (A \) El. H + C (A /) C (/)
1-stage compressor for heating and cooling	4-pipe	4.7.6	H + C (\ /)
1-stage compressor with reversing valve (for details, see below)	4-pipe	4.7.6	H + C (\ /)
2-stage compressor	2-stage heating or cooling	4.7.8	H + H (\ \) C + C (/ /)

- Notes
- Minimum on/off time: P48 / P49
 - Fan operation: P52 (0 = disabled, 1 = enabled)
 - Fan speed: P53 (1 = 1-speed, 2 = 3-speed)

4.7.11 1-stage heating or cooling with reversing valve

On this application, the thermostat controls a compressor in heating or cooling mode with changeover (automatic or manual). Cooling only is factory-set (P01=1).

- Set basic application "4-pipe" (see section 4.7.6)
- Connect compressor and reversing valve as follows:

Hardware

This application is available with RDG110 only.

ON/OFF control

The diagrams below show the control sequences for 2-position control.

Heating mode with manual selection
(P01 = 2)

Cooling mode with manual selection
(P01 = 2)

Heating and cooling mode (P01=04)

- T[°C] Room temperature
- w Room temperature setpoint

- X_{dz} Dead zone (P33)

4.8 Control outputs

Overview of control outputs

Different control output signals are available depending on the thermostat type, the position of DIP switches 4 and 5, and parameters P46 and P47 (see section 4.7.2).

Control output Product no.	2-position	2-position PWM	3-position	DC 0...10 V
RDG100, RDG100T RDG100T/H	Y1, Y2, Y3 (3 x N.O.)	Y1, Y3, (2 x PWM)	Y1/Y2, Y3/Y4 (2 x ▲ / ▼)	
RDG110	Y11/Y12, Y21/Y22 (2 x SPDT)			
RDG140				Y10, Y20 (2 x DC 0...10 V)
RDG160				Y10, Y20 (2 x DC 0...10 V)

ON/OFF control signal (2-position)

The valve or compressor receives the **OPEN/ON** command via control output Y1 or Y3 (RDG110: Y11, Y21) when

1. the acquired room temperature is below the setpoint (heating mode) or above the setpoint (cooling mode).
2. the control outputs have been inactive for more than the "Minimum output off-time" (factory setting 1 minute, adjustable via parameter P48).

OFF command when

1. the acquired room temperature is above the setpoint (heating mode) or below the setpoint (cooling mode).
2. the valve has been active for more than the "Minimum output on-time" (factory setting 1 minute, adjustable via parameter P49).

Electric heater control signal (2-position)

The electric heater receives an **ON** command via the auxiliary heating control output (Y..., see Mounting Instructions) when

1. the acquired room temperature is below "setpoint for electric heater"
2. the electric heater has been switched off for at least 1 minute

The **OFF** command for the electric heater is output when

1. the acquired room temperature is above the setpoint (electric heater)
2. the electric heater has been switched on for at least 1 minute

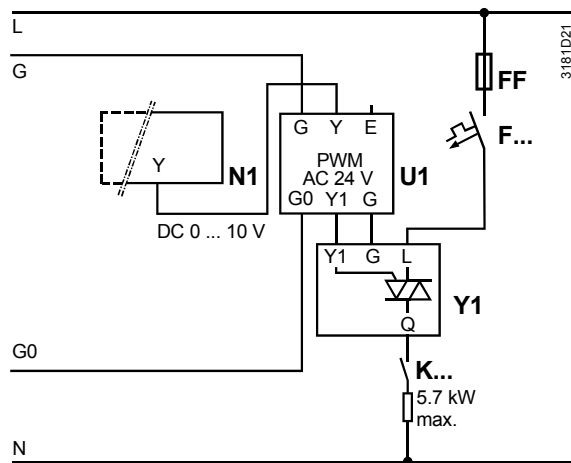

Caution

A safety thermostat (to prevent overtemperatures) must be provided externally.

Adaptive temperature compensation for el. heater (*RDG110 only, device index D and higher*)

When an electric heater is connected directly to output Y21, the current causes the relay contact to heat up. This falsifies the reading of the internal temperature sensor. The RDG110 (*device index D and higher*) compensates the temperature if the rated current of the electric heating is entered in parameter 46.
Default setting: 1 A for loads ≤ 1 A.

3-position control signal	<p>This function is available with RDG100, RDG100T and RDG100T/H only.</p> <p>Heating: Output Y1 provides the OPEN command, and Y2 the CLOSE command to the 3-position actuator. Cooling: Idem with Y3 and Y4.</p> <p>The factory setting for the actuator's running time is 150 seconds. It can be adjusted via parameters P44 (Y1 and Y2) or P45 (Y3 and Y4).</p> <p>The parameters are only visible if 3-position is selected via DIP switches 4 and 5.</p>
Synchronization	<ol style="list-style-type: none"> 1. When the thermostat is powered up, a closing command for the actuator running time + 150% is provided to ensure that the actuator fully closes and synchronizes to the control algorithm. 2. When the thermostat calculates the positions "fully close" or "fully open", the actuator's running time is extended + 150% to ensure the right actuator position is synchronized to the control algorithm. 3. After the actuator reaches the position calculated by the thermostat, a waiting time of 30 seconds is applied to stabilize the outputs.
PWM control	<p>This function is available with RDG100, RDG100T and RDG100T/H only.</p> <p>The demand calculated by PI control from the current room temperature and set-point is provided via Y1 and Y3 to the valve actuator as a PWM signal (pulse width modulation) for thermal actuators. The output is activated for a period proportional to the heating / cooling demand and then switched off for the rest of the PWM interval.</p> <p>The interval is 150 seconds (factory setting). It can be adjusted via parameters P44 (Y1) or P45 (Y3). These parameters are only visible if 2-position is selected via DIP switches 4 and 5 and if PWM is selected via P46 and P47.</p>
Note!	For PWM, the integral time (P35) must be set to 0 .
PWM for thermal valve actuators	For thermal valve actuators, set the running time to 240 seconds.
Note!	<ul style="list-style-type: none"> • Never apply PWM to an electromotoric actuator • It is not possible to ensure exact parallel running of 2 or more thermal valve actuator. If several fan coil units are driven by the same thermostat, preference should be given to electromotoric actuators with on/off or 3-position position control.
PWM for electric heaters	<p>For electric heaters, set the running time to 90 seconds.</p> <p>To avoid burn-off of mechanical contacts by frequent switching, use a current valve in place of a relay or contactor.</p>
Note!	For PWM, the integral time (P35) must be set to 0 .
DC 0...10 V control	This function is available with RDG140 and RDG160 only.
DC 0...10 V for valve actuators	<p>The demand calculated by PI control from the current room temperature and setpoint is provided via Y10 and Y20 to the valve actuator as a continuous DC 0...10 V signal.</p>
DC 0...10 V for electric heaters	<ul style="list-style-type: none"> • The demand calculated by PI control from the current room temperature and setpoint is provided via Y20 as a continuous DC 0...10 V signal. • The signal converter (SEM61.4) converts the DC 0...10 V signal to AC 24 V PDM pulses for the current valve. • The current valve (SEA45.1) supplies the electric heater with AC 50...660 V pulsed current.

- N1 RDG140, RDG160
- U1 Signal converter SEM61.4 (see Data Sheet N5102)
- Y1 Current valve SEA45.1 (see Data Sheet N4937)
- K... Safety loop (e.g. safety thermostat and high-temperature cutout)
- FF Very fast-acting fuse
- F... Overcurrent trip

4.9 Fan control

Overview of fan outputs

Different fan output signals are available depending on the thermostat type:

Product no.	Control output	On/off 1- / 3-speed fan	Modulating fan DC 0...10 V
RDG100, RDG100T, RDG100T/H		Q1,Q2,Q3 (3)	
RDG110		Q1,Q2,Q3 (3)	
RDG140		Q1,Q2,Q3 (3)	
RDG160			Y50 (1)

() Number of outputs

Only one fan output at a time is on, either Q1, Q2 or Q3.

The fan operates in automatic mode or at the selected speed with manual mode. In automatic mode, the fan speed depends on the setpoint and the current room temperature. When the room temperature reaches the setpoint, the control valve closes and the fan switches off or stays at fan speed 1

SW 7.2 and higher: Parameter P15 (factory setting 0 = fan speed OFF in dead zone)
SW < 7.2 : Parameter P60 (factory setting 0 = fan speed 1 in dead zone)

3-speed fan control with modulating heating / cooling control

The individual switching points for **ON** of each fan stage can be adjusted via control parameters P55...P57. The fan speed switch off point is 20% below the switch on point. The diagrams below show fan speed control for modulating PI control.

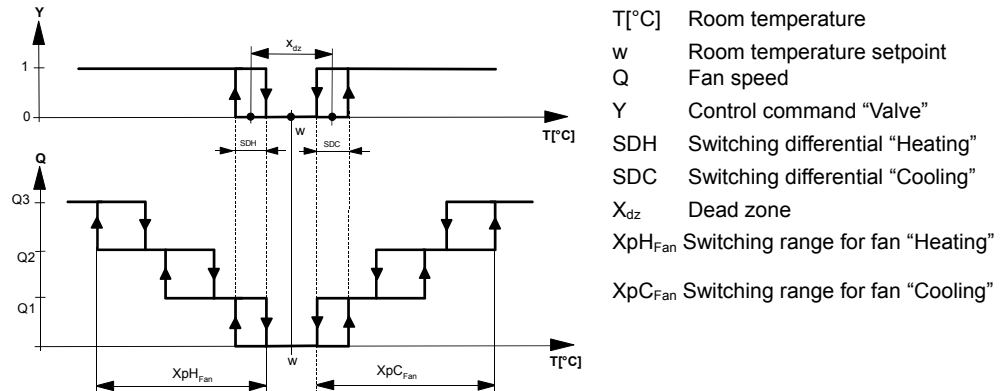

Note: The diagram only shows the PI controller's proportional part.

3-speed fan control with on/off heating / cooling control

On applications with 2-position control:

- 1) The switching point for low fan speed (Q1) is synchronized to the heating / cooling output. Parameter "Switching point fan speed low" P57 is not relevant.
- 2) The maximum switching range of the fan ($X_{pH_{Fan}} / X_{pC_{Fan}}$) is defined by the switching differential (SDH/SDC) via a look-up table.

Look-up table with on/off control

SDH/SDC [K]	0.5	1.0	1.5	2.0	2.5	3.0	3.5	4.0	>4.5
X _{pH_{Fan}} /X _{pC_{Fan}} [K]	2	3	4	5	6	7	8	9	10

1-speed / 3-speed fan

The thermostat can control a 1-speed or 3-speed fan (selected via control parameter P53). A 1-speed fan is connected to terminal Q1, a 3-speed fan to terminals Q1, Q2 and Q3.

Control sequence for modulating fan (ECM fan)

RDG160 has a DC 0...10 V output for electronically commutated (ECM) fan motors. The switching points can be set via parameter P55...P57.

Note: The diagram only shows the PI controller's proportional part.

Manual operation (ECM fan)

Fan speed 1 = S_{Fmin}
 Fan speed 2 = half-way between S_{Fmin} and S_{Fmax}
 Fan speed 3 = S_{Fmax}

Note: The control signals "Heating" and "Cooling" are not influenced by the manual setting of fan speeds.

Fan operation as per heating / cooling mode, or disabled

Fan operation can be limited to be active with cooling only or heating only, or even be totally disabled via control parameter "Fan operation" P52. When fan operation is disabled, the fan symbol on the display disappears and pressing the fan button has no influence. This function allows you to use the thermostat on universal applications such as chilled / heated ceilings and radiator, etc. (see sections 4.7.9 ff).

Fan minimum on- time

In automatic mode, a dwelling time of 2 minutes (factory setting) is active. The fan maintains each speed for at least 2 minutes before it changes to the next speed. This minimum on-time can be adjusted from 1...5 minutes via parameter P59.

Fan kick

In automatic fan mode and with the room temperature in the dead zone, the control valve is normally closed and the fan disabled. With the fan kick function, the fan can be released from time to time at low speed for minimum on-time (see above) even if the valve is closed.

This function can be used to avoid damage from moisture due to a lack of air circulation, or to allow a return air temperature sensor to acquire the correct room temperature.

The periodic fan kick time can be selected individually for Comfort mode via parameter P60, and for Economy mode via parameter P61.

- Notes
- Fan kick value “0” means the fan runs continuously in the dead zone.
 - Fan kick value “OFF” means the fan does not run in the dead zone.

Fan operation in dead zone

The fan kick (P60) and Fan in dead zone (P15) are combined as an OR-function. SW < 7.2 / device index < E in Comfort mode: the fan function in the dead zone is enabled / disabled via P60.

Fan start

When the fan starts from standstill, it starts at speed 3 for 1 second to ensure safe fan motor start by overcoming inertia and friction (selected via parameter P58).

Fan overrun for electric heater

When the electric heater is switched off, the fan overruns for 60 seconds (parameter P54) to avoid overtemperature of the electric heater or prevent the thermal cutout from responding.

Fan failure

In case of fan failure, the thermostat cannot protect the electric heater against overtemperature. That is why the electric heater must feature a separate safety device (thermal cutout).

Clean fan filter reminder

The clean fan filter reminder function counts the fan operating hours and displays message “FIL” with a bell icon to remind the user to change /clean the fan filter as soon as the threshold is reached (can be set via parameter P62). This does not impact the thermostat's operation, which continues to run normally.

The clean filter reminder is reset when the operating mode is manually set to Protection and back.

Fan in Auto Timer mode

(RDG100T, RDG100T/H only)

In Auto Timer mode, the default fan mode is automatic. The fan mode can be changed to manual by pushing the “FAN” button. The fan returns to the automatic default mode after each switchover from Comfort to Economy mode and vice versa.

Fan start delay

(2-position control only)

To let the heating / cooling coil reach its temperature, the fan start can be delayed by a time period set via parameter P67.

4.10 Multifunctional input, digital input

The thermostat has 2 multifunctional inputs X1 and X2 and a digital input D1. A sensor type NTC like the QAH11.1 (AI, analog input) or a switch (DI, digital input) can be connected to the input terminals. The functionality of the inputs can be configured via parameters P38 for X1, P40 for X2, and P42 for D1.

#	Function of input	Description	Type X1/X2	Type DI
0	Not used	No function.	--	--
1	External / return air temperature	Sensor input for external room temperature sensor or return air temperature sensor to acquire the current room temperature, or floor heating temperature sensor to limit the heating output. <i>Note:</i> The room temperature is acquired by the built-in sensor if the floor temperature limitation function is enabled via parameter P51.	AI	
2	Heating / cooling changeover	Sensor input for automatic heating / cooling changeover function. A switch can also be connected rather than a sensor (switch closed = cooling, see section 4.6).	AI/(DI)	DI
3	Operating mode switchover	Digital input to switch over the operating mode to Economy. If the operating mode switchover contact is active, user operations are ineffective and "OFF" is displayed.	DI	DI
4	Dewpoint monitor	Digital input for a dewpoint sensor to detect condensation. Cooling is stopped if condensation occurs.	DI	DI
5	Enable electric heater	Digital input to enable / disable the electric heater via remote control.	DI	DI
6	Fault	Digital input to signal an external fault (example: dirty air filter). If the input is active, "ALx" is displayed (Alarm x, with x = 1 for X1, x = 2 for X2, x = 3 for D1). <i>Note:</i> Fault displays do not influence the thermostat's operation. They merely represent a visual signal.	DI	DI

Operational action can be changed between normally open (NO) and normally closed (NC) via parameter P39, P41 (or P43 if it is a digital input).

Each input X1, X2 or D1 must be configured with a different function (1...5).

Exception: 1, 2 or 3 inputs can be configured as alarm inputs (6).

X1 is factory-set to "External sensor" (1), X2 to "Heating / cooling changeover" (2), and D1 to operating mode changeover (3).

If a multifunctional input is configured as analog: "Err" will be displayed when the output is out of range (0...49 °C), open or shorted.

For more detailed information, refer to section 4.5 "Applications".

Installation note:

- For inputs X1, X2, or D1, one physical switch can be used for up to 20 thermostats (parallel connection).
Caution! DO NOT mix X1 / X2 (mains potential) and D1.
- For sensors on inputs X1, X2, or D1, the cable length is max. 80 m.

4.11 Auto timer (RDG100T, RDG100T/H only)

The thermostat provides an Auto Timer mode with 8 programmable timers. Each timer can be assigned to one or several days. In this mode, the thermostat automatically changes over between Comfort and Economy mode according to the preprogrammed timers.

Buttons of the
RDG100T/H

Button ✓ = bottom, button ↵ = top (see operating instructions B3181.4).

Setting the time of day and the weekday

1. Press the program mode button to enter the programming mode menu.
2. Press button ✓ (OK) to enter the setting mode for the time of day. The time digits start blinking.
3. Turn the rotary knob clock- or counterclockwise to set the time of day.

12-hour and 24-hour
format

If the current time of day is in 24-hour format and you wish to change it to 12-hour format, turn the knob clockwise passed 23:59 or counterclockwise passed 00:00.

If the current time of day is in 12-hour format and you wish to change it to 24-hour format, turn the knob clockwise passed 12:00 pm or counterclockwise passed 12:00 am.

4. Confirm the time of day by pressing the right button ✓
The weekday indicator starts blinking.
5. Turn the rotary knob clock- or counterclockwise to set the current weekday.
6. Confirm the current weekday by pressing button ✓ (OK).
7. Press the program mode button ↵ (Esc) to leave the program mode.

Note Time and weekday are always visible on the display, even when auto timer is OFF (P02 = 3 or 4 on RDG100T/H and RDG100T with SW V7.2 and higher / device index E).

Power failure

After a power failure, the time of day will blink to indicate power was lost. However the auto timer will continue to run with the time before the power loss occurred. Enter the setting mode to adjust the time of day if needed.

Setting the timers (RDG100T.. only)

The RDG100T / RDG100T/H provides 8 programmable timers A1 ... A8. Each timer has a Comfort mode start and end time that can be applied to one or several weekdays. To set an auto timer, proceed as follows:

1. Press the program mode button twice to select "Auto timer setting"  on the "Programming mode" menu.
2. Turn the rotary knob to the desired timer A1...A8 that you wish to adjust and press button ✓ (OK).
3. Turn the rotary knob to adjust the Comfort mode start time and confirm by pressing button ✓ (OK).
4. Turn the rotary knob to adjust the Comfort mode end time or Economy start time respectively and confirm by pressing button ✓ (OK)
5. Weekday , ✓ and  blink. Press button ✓ (OK) to select or button  (Esc) to deselect each day and advance to the next day.
6. After the 7th day is adjusted, all selected weekdays blink. Confirm setting for actual timer by pressing button ✓ (OK) and advance to the next timer. To adjust the next timer, repeat step 3...6 or press button  (Esc) to leave the setting mode.

- Notes
- To save your adjustments, remember to press button ✓ (OK) in step 6 above before pressing button  (Esc) to leave the programmable timer setting mode.
 - Auto timer can be disabled via parameter P02 (=3 or 4) (RDG100T/H and RDG100T with SW SW7.2 and higher / device index E).
 - Time and weekday are always visible on the display, even when auto timer is OFF (RDG100T/H and RDG100T with SW V7.2 and higher / device index E).

View the programmable settings

You can view the 8 timers in sequence:

1. Press the program mode button twice to select the "Auto timer setting"  in programming mode.
2. Turn the rotary knob to review the 8 auto timers.
3. Press button  (Esc) to return to normal operation.

Default timer settings

Timers A1...A4 have the following default settings (residential use):

Days	Time when thermostat is in Comfort mode	
Mon(1)- Fri(5)	06:30 – 08:30 (A1)	17:30 – 22:30 (A2)
Sat (6)	08:00-23:00 (A3)	
Sun (7)	08:00-22:30(A4)	
	<ul style="list-style-type: none"> • The thermostat is in Economy mode  during the remaining time • Timers A5...A8 are free with no default settings 	

Reloading the default timer settings

1. Press the program mode button twice to select the “Auto timer setting”  in programming mode.
2. Press button  (OK) to enter the timer setting mode.
3. Press the program mode button for at least 3 seconds.
“rES” will be displayed.
4. Press button  (OK) to confirm reloading of the default timer settings or button  (Esc) to leave without change.
The display will show “8888” during the reloading process.

Overlapping of timer sequences

When several timer sequences overlap, the resulting output is the OR combination of the Comfort mode time of all timers.

4.12 Handling faults

Temperature out of range

When the room temperature is outside the measuring range, i.e. above 49 °C or below 0 °C, the limiting temperatures blink, e.g. “0 °C” or “49 °C”. In addition, the heating output is activated if the current setpoint is not set to “OFF”, the thermostat is in heating mode and the temperature is below 0 °C. For all other cases, no output is activated.

The thermostat resumes Comfort mode after the temperature returns to within the measuring range.

4.13 Infrared remote control

Use the IRA211 infrared remote control to operate a thermostat with built-in infrared receiver. The following operations can be carried out remotely:

- Select Protection, Comfort or Auto Timer mode
- Adjust setpoint in Comfort mode
- Select fan mode “Automatic” or “Manual”

A buzzer in the thermostat indicates remote control command reception. Infrared remote control can be disabled via parameter P70.

4.14 DIP switches

Use the DIP switches at the rear of the thermostat to commission the thermostat's basic application prior to snapping it to the base.

- The application is set via DIP switches 1...3
- The function of the control outputs (2-position or 3-position) is set via DIP switches 4 and 5 for RDG 100, RDG100T and RDG100T/H.
For RDG140 and RDG160 (DC 0...10 V), DIP switches 4 and 5 serve to invert the DC 0...10 V signal

For details concerning connection of peripheral devices and setting of the DIP switches, refer to the Mounting Instructions:

- [4] M3181.1 (RDG100, RDG100T)
- [5] M3181.2 (RDG110)
- [6] M3181.3 (RDG140, RDG160)
- [7] M3181.4 (RDG100T/H)

Note During startup, the thermostat reloads the control parameter factory settings after each change of DIP switch setting.

4.15 Control parameters

A number of control parameters can be readjusted to optimize control performance. These parameters can also be set during operation without opening the unit. In the event of a power failure, all control parameter settings are retained.

The control parameters are assigned to 2 levels:

- “Service level”, and
- “Expert level” with “Diagnostics and test”

The “Service level” contains a small set of parameters to set up the thermostat for the HVAC system and to adjust the user interface. These parameters can usually be adjusted any time.

Change parameters at the “Expert level” carefully, as they impact control performance and functionality of the thermostat.

Parameter setting

Change the parameters as follows:

Enter only “Service level”

1. Press left and right button simultaneously for >3 seconds, release them, then press the right button for >3 seconds.
The display shows “P01”.
Continue with step 2.

Enter “Expert level” and
“Diagnostics and test”

1. Press left button and right button simultaneously for >3 seconds, release them, press the left button for >3 seconds, then turn the rotary knob counterclockwise min. ½ rotation.
The display shows “Pxx”.
Continue with step 2.

Adjusting parameters

2. Select the required parameter by turning the rotary knob.
3. Press button ✓ (OK); the current value of the selected parameter starts blinking and can be changed by turning the rotary knob.
4. Press button ✓ (OK) to confirm the adjusted value or press button ↵ (Esc) to cancel the change.
5. If you wish to adjust additional parameters, repeat steps 2...4.
6. Press button ↵ (Esc) to leave the parameter setting mode.

Resetting parameters

The factory setting for the control parameters can be reloaded via parameter P71, by changing the value to “ON”. Confirm by pressing the right button.
The display shows “8888” during reloading.

Buttons of the
RDG100T/H

Button ✓ = bottom, button ↵ = top (see operating instructions B3181.4).

4.15.1 Parameters of the "Service level"

- ✓ Parameter available
x Parameter not available

- Notes
- P46, P47: Setting to 2-position or 3-position is made with DIP switches 4 and 5.
 - P46 to compensate for heat dissipation of the el. heater relay in RDG110.
 - If no sensors or switches are connected, it is not necessary to disable the inputs (P38, P40 or P42 = no function), the thermostat recognizes if a sensor is connected (but diagnostic shows "Err").

***) RDG100T/H and thermostats with SW 7.2 and higher / device index E

5 Handling

5.1 Mounting and installation

Do not mount on a wall in niches or bookshelves, behind curtains, above or near heat sources, or exposed to direct solar radiation. Mount about 1.5 m above the floor.

Mounting

- The room thermostat must be mounted in a clean, dry indoor place and must not be exposed to drip or splash water

Wiring

See Mounting Instructions (M3181) enclosed with the thermostat.

- Comply with local regulations to wire, fuse and earth the thermostat
- Size correctly the cables to the thermostat, fan and valve actuators for AC 230 V mains voltage
- Use only valve actuators rated for AC 230 V on RDG100... / RDG110
- The power supply line must have an external fuse or circuit breaker with a rated current of no more than 10 A
- Isolate the cables of inputs X1-M / X2-M and D1-GND if the conduit box carries AC 230 V mains voltage
- On the RDG100.. and RDG110, inputs X1-M and X2-M carry mains potential. If the sensor's cables are extended, they must be suited for mains voltage
- Inputs X1-M, X2-M or D1-GND of different units (e.g. summer / winter switch) may be connected in parallel with an external switch. Consider overall maximum contact sensing current for switch rating
- Disconnect power supply before removing the thermostat from the mounting plate!

Commissioning

Select the application and the type of control output via the DIP switches before fitting the thermostat to the mounting plate.

After power is applied, the thermostat carries out a reset during which all LCD segments blink, indicating that the reset was correct. After the reset, which takes about 3 seconds, the thermostat is ready for commissioning by qualified HVAC staff.

The control parameters of the thermostat can be set to ensure optimum performance of the entire system (see section 4.15, control parameters).

Control sequence

- The control sequence may need to be set via parameter P01 depending on the application. The factory setting for the 2-pipe application is "Cooling only"; and "Heating and cooling" for the 4-pipe application

Compressor-based application

- When the thermostat is used in connection with a compressor, the minimum output on-time (parameter P48) and off-time (parameter P49) for Y11/Y21 must be adjusted to avoid damage to the compressor and shortening its life
- Recalibrate the temperature sensor if the room temperature displayed on the thermostat does not match the room temperature measured. To do this, change parameter P05

Calibrate sensor

Adaptive temperature compensation for el. heater

- When an electric heater is connected directly to output Y21, the rated current of the electric heating should be entered in parameter 46 (*RDG110 only, device index D and higher*), see section 4.8.
Default setting: 1 A for loads ≤ 1 A.

Setpoint and setpoint setting range limitation

- We recommend to review the setpoints and setpoint setting ranges (parameters P08...P12) and change them as needed to achieve maximum comfort and save energy

5.2 Operation

See also Operating Instructions B3181 enclosed with the thermostat.

Layout

- 1 Operating mode button / Esc
- 2 Button to enter the time and to set the timers
- 3 Fan mode button / OK
- 4 Rotary knob for setpoint and parameter adjustment

Button operation

- When the thermostat is in normal operation, the actual operating mode and status are indicated by symbols
- When a button is pressed, the thermostat goes into mode selection. The backlit LCD will turn on, all possible mode selection options (symbols) will turn on, indicator element (arrow) will appear on the current mode/status
- When the button is pressed again, the indicator element will change to the next mode symbol and so on.
- After the last press and a timeout of 3 seconds, the newly selected mode is confirmed, the other elements disappear
- After a timeout of 20 seconds, the LCD backlight will turn off

User action	Effect, description
Press left button	Go into Operating mode selection
Press left button >3 seconds	Set thermostat to Protection mode
Keep left button depressed and turn rotary knob clockwise	Activate temporary timer "Extend presence" and set the time (for details, see page 20)
Keep left button depressed and turn rotary knob counterclockwise	Activate temporary timer "Extend absence" and set the time (for details, see page 20)
Press left button while "Operating mode switchover" is activated	Activate "Extend Comfort mode" (for details, see page 20)
Press right button >3 seconds	Activate / deactivate button lock
Press right button for fan coil unit	Change fan mode
Press right button for chilled ceiling (P52=0)	Set thermostat to Protection mode
Turn rotary knob	Adjust the room temperature setpoint
Press left and right button >3 seconds, release, then press right button >3 seconds	Go to parameter setting mode Service level"
Press left and right button for 3 seconds, release, press left button for 3 seconds, then turn rotary knob counterclockwise min. ½ rotation	Go to parameter setting mode Expert level, diagnostics and test

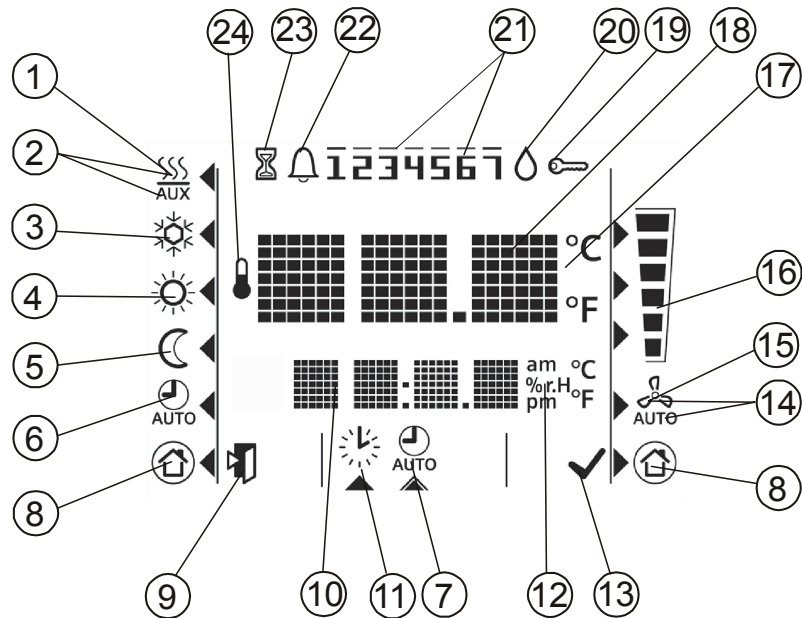

Only on RDG100T and RDG100T/H:

Press center button	Go to timer settings
---------------------	----------------------

Buttons of the
RDG100T/H

Button ✓ = bottom, button  = top (see operating instructions B3181.4).

LCD

#	Symbol	Description	#	Symbol	Description

13		Confirmation of parameters	24		Indicates that room temperature is displayed

5.3 Disposal

The device is classified as waste electronic equipment in terms of the European Directive 2002/96/EC (WEEE) and should not be disposed of as unsorted municipal waste.

The relevant national legal rules must be adhered to.

Regarding disposal, use the systems setup for collecting electronic waste.

Observe all local and applicable laws.

7 Mechanical design

7.1 General

The room thermostat consists of 2 sections:

- Plastic housing which accommodates the electronics, the operating elements and the temperature sensor
- Mounting plate with the screw terminals

The housing engages in the mounting plate and is secured with 2 screws on the left side.
